Stormy weather in North Eastern Nigeria. Torrential rains and seasonal severe weather make roads impassable, cutting off food assistance to the neediest and most remote places. People should be planting next season’s crop but the Boko Haram insurgency is keeping them from their fields.

Mothers with babies, being tested for malnutrition with MUAC (Middle Upper Arm Circumference). People should be planting next season’s crop but the Boko Haram insurgency is keeping them from their fields. The lean season, when food stores from the previous harvest typically runs out, is pushing up already alarming rates of hunger and malnutrition across northeaster Nigeria, with roughly 5.2 million people currently facing extreme hunger. If people can’t plant for the next season, hunger will continue to rise.

“Malnutrition is one of the greatest challenges in this area here and within this camp specifically we have seen the rates drop from over 30 percent to less than 10 percent, and this has been the result of the food assistance that we provided in this location”

WFP uses a smartphone based platform called SCOPE where all the beneficiary data is kept.
SCOPE is used to register people, calculate the assistance they require, and then deliver it in the most efficient and effective manner. It helps WFP make the most of its resources, while better tailoring the response to people’s needs.

SOT (Hausa) Joshua Palla
“During one rainy season Boko Haram invaded our village and we run towards this mountain and stayed there for about 6 months. We have no food there and have drinking water from ponds. We were eating tree leaves, wild fruits. We suffered a lot as we left our home without carrying anything.”

ENDS
WFP urgently needs US$172 million for its operations as the lean season hits northeastern Nigeria, driving up food prices, depleting the meagre resources of millions of people affected by conflict and intensifying hunger. The crisis risks worsening as torrential rains make roads impassable, cutting off food assistance to the neediest and most remote places.

The lean season is pushing up already alarming rates of hunger and malnutrition across northeastern Nigeria, with roughly 5.2 million people currently facing extreme hunger. This is the planting season, but the Boko Haram insurgency has displaced more than two million people and prevented farmers from accessing their fields. Meanwhile a financing shortfall has forced WFP to abandon plans to reach as many as 1.8 million people monthly during the June-August lean season (current plans target only 1.36 million), and scale back nutritional assistance to young children.

In the hardest-hit states of Borno, Adamawa and Yobe, more than one-third of them are on the brink of famine, and tens of thousands are experiencing either outright famine or something very close to it.

Meanwhile, hungry people are on the move, compounding the humanitarian challenge. Thousands of Nigerian refugees are returning from Cameroon, and WFP and other aid agencies are now scrambling to feed and shelter them. Other people are heading back to barren homes and fields, with few or no means to restart their lives.

WFP is the world's largest humanitarian agency fighting hunger worldwide, delivering food assistance in emergencies and working with communities to improve nutrition and build resilience. Each year, WFP assists some 80 million people in around 80 countries.
